

ST. MARY'S HIGH SCHOOL

Phoenix, Arizona

Cost savings resulted in approximately \$300,000 by developing a multi-level/multi-use building design with basement level cafeteria.

CLIENT:
Catholic Diocese of Phoenix

DESCRIPTION:
St. Mary's High School was completed in two separate phases. The first addressed the preliminary needs assessments, site and master planning for the relocation of this high school. Classroom buildings were remodeled; including the computer laboratory, art rooms, teachers' lounges and the bookstore. During Phase II we designed a new 46,000 sq. ft. building for administration offices, library, chapel, science labs, classrooms, cafeteria/kitchen and outdoor amphitheater. Phase II was completed with an accelerated, six-month construction schedule while school was in session.
